

# Emergency Response Asset *Response Vehicles*

---

**Date in Service: 2018**

**Number of Assets: 11**

---

## CAPABILITY OVERVIEW

### Asset Locations

Fredericton, N.B.  
Bathurst, N.B.  
Moncton, N.B.  
St. Andre, N.B.  
Bathurst, N.B.

These vehicles give RADCOM's teams the capability to respond to a field scene and to provide communication solutions to meet the needs of other agencies.

The unit itself is self-sufficient and when deployed can provide the following capabilities:

- Access to several disparate radio communication systems (VHF, UHF, 700 MHz P25, etc.)
- We can also provide:
  - o Both infrastructure enhancement and end user radio equipment
  - o Communications support and planning
  - o On-site equipment training and resources

These vehicles are part of an overall communications support program providing the same functions in the field as command post setting. On board would be all the items to facilitate the primary function as well as caches of radio equipment and response assets to assist in the field, if need be.
